Whether it's terracotta pots, plastic, milk bottles, window boxes, tub gardens they all work wonderfully in a small space like a terrace or a deck, small yard or even inside. There are any number of sizes to choose from for the space you have. You can use small stands and pedestals to create a layered effect.

Both ornamental and edicible plants can be grown. We have grown dwarf lemon and lime trees, strawberries and tomatos both cherry and plum. You can even grow pots of lettuce, herbs and mesculan. (and if you check out the price of organic mesculan you'll have plenty of incentive to try growing some yourself.

Next month we'll have more on the best varieties of greens for small space and container gardening.
